E-commerce site for clothing business

Abstract

The **E-commerce site for clothing business** is a web-based application to expand the business through online. This project focuses on developing an e-commerce website tailored for a clothing business, aimed at providing a seamless online shopping experience for customers. The platform will feature an intuitive user interface, responsive design, and robust functionality to meet the demands of modern consumers. Key features include a dynamic product catalog, secure payment gateway integration, user-friendly navigation and personalized recommendations. The system is designed to enhance customer engagement, streamline operations, and support scalability, ultimately driving business growth in the competitive online marketplace.

Tools

- Server Side   : PHP
- Client Side   : HTML, CSS, Javascript
- IDE   : Vs code
- Back end   : MySQL 5

Modules

1. **Intro Page**

   o Overview of the website with a brief introduction to the clothing business. Includes branding, promotional banners, and quick access links.

2. **Login or Sign-in Page**

   o Allows users to register or log in using their credentials.

3. **Home Page**

   o Displays featured collections, trending items, and navigation links to different sections. Incorporates search functionality and filters for convenience.

4. **Store Page**

   o Catalog of clothing items categorized by type, gender, occasion, etc. Includes sorting options by price, popularity, or new arrivals.

5. **Detail Description Module**

   o Provides detailed information about a selected product, including price, size, color, material, and availability. Includes customer reviews and a "related items" section.

6. **Offer page**

   o Highlights discounts, deals, and promotional offers. Includes options for applying promo codes or viewing seasonal sales.

7. **Profile Module**

   o User profile management, including order history, saved items, and preferences. Allows users to update personal information and track orders.

8. **Cart page**

   o Allows users to add, view, and manage selected products for purchase. Includes options for modifying quantities and estimating the total price.
